

## **April 2026 Release**

### **Release Notes**

---

A MetaFarms software release will be implemented on April 28, 2026. **100%** of the below features and defects came from feedback from our customers. Please be sure to continue with your questions/comments on this release and any future enhancements you would like to see!

Below are some of the enhancements available and defects that were fixed.

\*\* Note: Additions to reports can result in changing column headers, inserting new columns and rows, and may affect any macros you have for that report. To help reduce the impact on custom written macros, we suggest users unhide Row 1 and reference the column name vs referencing the letter of the column in the macro.

### Release Features

#### **Assurance**

##### **Feature 8857: Not Observed 'N/O' Option Added to Assessment Questions**

Assurance users will be able to assign an "Allow N/O" option to assessment questions when the questions are created. Questions that receive this designation will show an "N/O" field allowing the person completing the audit to mark the question as "Not Observed" when applicable. If this selection is made, points will not be scored for the question, but the answer will not decrease the overall assessment score (similar to the existing N/A option).

#### **Finish**

##### **Feature 8172: Metric Adjusted Feed Conversion**

For customers using metric units, all instances of 'Adj FCR' on reports will now be accurately calculated using Metric equivalent weights to match Imperial Version.

##### **Feature 8583: Update Calculation for Days to 1<sup>st</sup> Market on Combined Group Closeout**

The calculation of "Days To First STD Sale" shown in row 96 has been changed to consider Packer Sale Movements that happen before a Packer Lot on a group. This will now also match cell E9 on the Group Detail Closeout report.

Note: Groups closed in the last 5 years have been recalculated to also show this change.

**Feature 8627: Add 'Group Type' Report Control to Inventory By Production Week Report**

A report control for 'Group Type' has been added to the Inventory By Production Week report. This will allow users to run the report by All Types, Nursery, Finish, or Wean to Finish.

**Sales****Feature 8317: Sales Performance Monitor Report Changes**

Base Value, Lean Premium, Sort Loss, and Total Value are now calculated as weighted averages instead of simple averages. This will now match what is shown on the Market Sales Summary and Summary Kill Sheet for Per Hd, Per Carcass CWT, and Per Live CWT.

'No. Delivered' has replaced 'No. Market Hogs' in row 17 and will include discounts when present. This value is used for the Per Head (Delivered) section and will match the 'Total Delivered' column on the Market Sales Summary.

**Sow****Feature 8650: Add 'Topigs API Reason' to Sow Removal Reasons Form**

A column for 'Topigs API Reason' has been added to the Sow Removal Reasons form. This will be used by customers on the Topigs integration for sending sow removal information to Topigs.

**Feature 8776: Semen Batch Name on Services By Breed Week Report**

On the 'Matings' tab of the Services By Breed Week report, Semen Batch Name has replaced Semen Batch ID in column K.
