

December 2023 Release

Release Notes

The MetaFarms software release will be implemented on December 12, 2023. **100%** of the below features and defects came from feedback from our customers. Please be sure to continue with your questions/comments on this release and any future enhancements you would like to see!

Below are some of the enhancements available and defects that were fixed.

Note: Additions to reports can result in changing column headers and may affect any macros you have for that report. To help reduce the impact on custom written macros, we suggest users unhide Row 1 and reference the column name vs referencing the letter of the column in the macro.

New columns added to reports will be visible in the MetaFarms Full version and hidden in the MetaFarms Summary version.

Release Features

API

Feature 3060 – AgView Premise ID Deletion for Inactive Sites

The AgView API will now delete a previously uploaded site w/Premise ID from the AgView website if the site is deleted or made inactive within MetaFarms.

Feature 4113 – AgView API Movements Limit

A change was made to the AgView API that removed a limitation on movements with less than 20 pigs from going over to AgView. Now, any movement of pigs that meets the requirements set by AgView, will be pushed up to their site.

Feature 4373 – Add Boar Semen Batches to AgView API

The AgView API has been changed to start sending over Semen from Semen Batch Source when the option to do so is set in Company Defaults under the AgView section. Once all pieces to enable are setup, semen movements will start flowing over to AgView. If you want to enable this new feature, please contact Support to help with the setup process.

Sow

Feature 3379 – Sow Correction Report – Include Current Production Week

Report can now be run to report back from the current production week, instead of just the last production week.

Feature 4438 – Due to Farrow Calculation Change

In Site Defaults, the flag “Calculated Due Date with Average Gestation Days”, will also apply to the Sow Cards. When this setting is checked, Sow Cards will now display the due date based on the sow’s average gestation length.

Feature 4738 – Add Address to Semen Batch Source

Semen Batch Source now allows entry of Full Address and Premise ID. These columns will be sent to AgView if the option to send is setup.

Finish

Feature 4686 – Add Column to Active Group Summary

There are two new columns added to the Active Group Summary report. There is now a column that shows the mortalities for the Last 7 Days (not the last Production Week). This new column is column BK and could affect users with macros.

Sales

Feature 4466 – Add Column to Marketing Transportation Analysis

There is a column added to the Marketing Transportation Analysis report that adds Trucking/Freight (Column DC of the Marketing Sales Summary) into column AV. This will not affect macros. If the user running the report is setup for hiding financials, this column is suppressed and will appear blank.

Feature 4633 – Add Column to Market Sales Summary

There is a column added to the Market Sales Summary report that calculates CoVar Carcass Weight as Std. Deviation / Avg Carcass Weight * 100. This new column is column CB and could affect users with macros.

Release Defects

Sow

Defect 3394 – Pregnancy Check Entry – Crate/Stall

Fixed an issue on the Sow Data Entry (Pregnancy Check event) so an error will display if an invalid location is entered.

Defect 3395 – Removal Entry – Crate/Stall

Fixed an issue where the location of the removal event on Sow Data Entry was not being saved.

Defect 3396 – Wean Entry – Stall

Fixed an issue on the Sow Data Entry (Wean event) so an error will display if an incorrect stall is entered.

Defect 3397 – Heat No Service Entry – Stall

Fixed an issue on the Sow Data Entry (HNS event) so an error will display if an invalid location is entered.

Defect 4047 – Semen Batch Entry

Fixed an issue on Semen Batch Upload, when an Extender is not automatically matched, it wouldn't update the Expiration Days or Max Expiration Days that were applied to the Semen Batch.

Finish

Defect 3484 – Group Inventory Report Calculation

Fixed an issue where the calculation for Cumulative Feed Pounds per Pig was calculated wrong.

Defect 4433 – Mortality Import Accepting Inactive Reason

Fixed an issue where an inactive mortality reason was allowed via the Mortality Import.

Sales

Defect 4272 – Tyson Packer Import – Prop 12

Tyson added the additional premium amount given to customers that ship them Prop 12 compliant pigs. The import of these loads was changed to bring in that premium amount. Previously, if the premium amount was paid, the amount was reflected in the calculation of the Sort Loss, showing a positive Sort Loss. Now the Additional Premium field has been moved on

the sales grid, after the Total Sort Loss, to show the correct calculated amount as well as how the Total Carcass Value is calculated.

Sow Mobile

Defect 4325 – Total Piglet Inventory

Fixed an issue where Total Piglet Inventory was affected at the time of weaning when sow was removed via Sow Mobile.

Sincerely,

Your MetaFarms Customer Support/Account Services Team
