

Diet Conversion Table

Creating a Diet Conversion Table will allow you to roll up diets with slightly different names/codes to just one diet when importing feed. This eliminates having to change your Feed Budget each time a mill makes a slight Diet Name/Code change.

Select the Feed Mill you want to set up the Conversion Table for in the dropdown.

Click Create Table.

The blank table will come up. Name your table in the As Name field. In the Import Diet Name column enter the Codes (not diet name) that the mill is sending in the import files. In the MetaFarms Diet column enter the Code (not diet name) of the diet you want the Import Diet Name converted to. Click Save.
