

## ***February 2024 Release***

### **Release Notes**

---

The MetaFarms software release will be implemented on February 20, 2024. **100%** of the below features and defects came from feedback from our customers. Please be sure to continue with your questions/comments on this release and any future enhancements you would like to see!

Below are some of the enhancements available and defects that were fixed.

Note: Additions to reports can result in changing column headers and may affect any macros you have for that report. To help reduce the impact on custom written macros, we suggest users unhide Row 1 and reference the column name vs referencing the letter of the column in the macro.

New columns added to reports will be visible in the MetaFarms Full version and hidden in the MetaFarms Summary version.

### **Release Features**

#### **API**

##### **Feature 4465 – Batch ID added to Insights API**

The GetFinishGroups and GetGroupsByDate endpoints now include the column Batch ID from the group setup page.

##### **Feature 4375 – Added Feed Deliveries to AgView API**

Feed Deliveries have been added to the AgView API and will now be sent over to AgView if the Feed Mill for the Feed Delivery has a valid address. If you would like this option enabled, please contact MetaFarms Support.

#### **Sow**

##### **Feature 4870 – Added Location to Sow Treatment Event**

On the Treatment event, we have added the ability to enter the location of the animal being treated.

## **Sow Mobile**

### **Feature 5652 – Ability to Retag a Sow Without Changing Sow ID**

We have added the ability to change the RFID and Alternate ID without changing the Sow ID for the Retag event. You now have the option to set the new Sow ID field to not required and can skip entry when changing the RFID or the Alt ID. (Note: to update the RFID via mobile, it must be done with an RFID scanner.)

### **Feature 5666 – Parity 0 Defaulted for Arrival Event**

When completing an Arrival event, if Parity is not entered, it is defaulted to 0 for the Sow.

## **Release Defects**

### **Sow**

#### **Defect 5515 – Sow Search**

Fixed an issue in Sow Search to only display sows for units a user has access to.

#### **Defect 5646 – Stall Creation during Arrival Event**

Fixed an issue where an incorrect stall was being saved on an Arrival event via mobile. It should now report the stall that is being entered on the Arrival event.

#### **Defect 5653 – Customize Data Entry Review Report**

Fixed an issue so 1000-Day Withdrawal Date is now a customizable field on the Data Entry Review report.

### **Finance**

#### **Defect 5598 – Group Expense Import**

Fixed an issue in the Group Expense import that wasn't bringing in all expenses against an invoice if there were the exact same expenses duplicated.

Sincerely,

Your MetaFarms Customer Support/Account Services Team
