

Feed Budgets

Feed Budgets can be found on the Feed or Feed Management Setup tab under Feed Mills. Feed Budgets are nutritionist guidelines of pounds of feed per head and script days per ration to be fed to a group of animals. These Feed Budgets must be assigned at a Site level for Sow Unit or Group level for Finish in order to use Feed Ordering. See below for where these are set up at the site and group level.

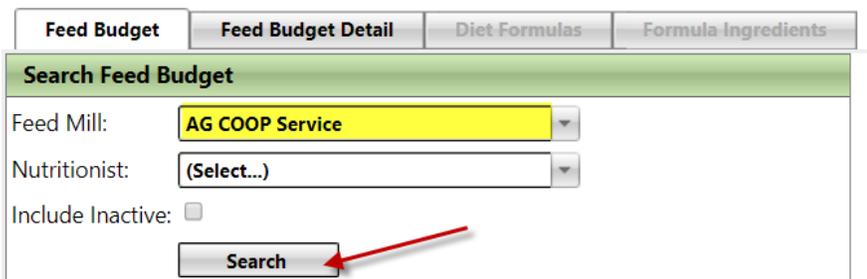

Prior to setting up the Feed Budgets, you will want to first set up: Feed Mills, Diets, Ingredients, Feed Phase, Feed Slide, Expected Health and Energy Levels. Procedures for these items can be found on the Help menu.

The screenshot shows the software's navigation menu with the following structure:

- Feed Management (Active)
 - Feed
 - Create Feed Delivery - Diets
 - Create Feed Delivery - Ingredients
 - Update Feed Delivery
 - Feed Transfers
 - Ordering
 - Feed Ordering
 - Work Flow
 - Feed Bin Observation
 - Site Health Breaks
 - Site Treatment Orders
 - Feed Prices
 - Feed Budgets
 - GrainBank
 - Prepay/Contract Feed
 - Imports
 - Feed Imports
- Reports
 - Master
 - Feed Ingredient Master*
 - Feed Nutrient Master
 - Feed Ingredient Nutrient Profile
 - Attributes
 - Diet Ingredient Percents
 - Feed Phase
 - Energy Level
 - Expected Health
 - Feed Based Growth Curves
 - Health Break
 - Health Lab
 - Storage Locations
 - Treatment Order
 - Feed Bins
 - Feed Bins
 - Feed Bin Scale
 - Feed Bin Types
 - Feed Bin Observation
 - Feed Mills
 - Feed Mills*
 - Feed Budgets** (highlighted)
 - Feed Slide

To search for existing Feed Budgets, select a Feed Mill or Nutritionist and click Search. Feed Budgets will come up below.

The screenshot shows the 'Search Feed Budget' form with the following fields:

- Feed Budget
- Feed Budget Detail
- Diet Formulas
- Formula Ingredients

Search Feed Budget

Feed Mill: **AG COOP Service**

Nutritionist: **(Select...)**

Include Inactive:

Search (indicated by a red arrow)

To add a new Feed Budget, click Add Feed Budget. A popup will open. Fill in the information for the Feed Budget and click Save and Close. We encourage Performance numbers to be filled out. Checking the Antibiotic Free or Ractopamine Free checkboxes will allow this to be shown on the Feed Order sent to the mill.

End Wt: 280.00

Active:

Comments:

Performance

ADG: 4.200

FC: 3.100

ADFI: 4.200

DOF: 162

Health

Expected Health: No Disease

Energy Level: Low Energy

Antibiotic Free:

Ractopamine Free:

Health Directive:

Nutrition Directive:

Feed Threshold

Min Order(tons): 1.00

Min Order(percent):

Number of days different from feed budget expected DOF to actual DOF (in days): 5

Quantity difference per animal from budget (in lbs): 2.00

Min Order (tons) is the minimum amount left of one diet before jumping to the next diet. Min Order (percent) can be used instead of tons but both cannot be used.

Number of days and Quantity Difference are thresholds for what to show on the Exception report. Number of Days is based on the Requested Delivery Date.

Once the Feed Budget has been added, add the Details by clicking on Details.

Feed Budget

Add Feed Budget Print

Row	Edit	Name	Code	Feed Mill	Details
1	<input type="button" value="Edit"/>	AG COOP FIN M 06-2018	AGCPFN0618	AG COOP Service	<input type="button" value="Details"/>

Click on Add Feed Budget Detail. Fill in the information for the first Feed Budget sequence. Click Save and Close.

Inventory Source can be any of the following. Actual would be if the pigs are already in the group. Typically not the first budget. Barn/Site Capacity and Estimated Inventory can be used when the group is scheduled but pigs are not actually there yet. Estimated Inventory can be used on double stocked groups as well.

Start Weight is required and End Weight will automatically calculate as you add each Detail of the Budget.

If you are using Feed Phase, select the Phase for this particular Diet.

Qty. Fed will be based on the Feed Budget provided you from your Nutritionist.

The performance numbers at this level are for this diet only, not the overall Feed Budget. These will fill in on the Feed Order screen and are needed in order to use Suggested Feed Orders.

Customers using MetaFarms Energy may fill out the Energy and Calorie Conversion.

Continue by adding each sequence in the same way until all sequences are complete.

For customers using the Feed Management module, Diet Formulas and Formula Ingredients can be added for each sequence.

Diet Formulas are the Diet Names and Codes (Not individual Ingredients) as specified in the Feed Budget. Click on the Formulas button on the sequence you are adding to.
