

## ***January 2023 Release***

### **Release Notes**

---

The MetaFarms software release will be implemented on January 17, 2023.

Below are some of the enhancements available and defects that were fixed.

**Note:** Additions to reports can result in changing column headers and may affect any macros you have for that report. To help reduce the impact on custom written macros, we suggest users unhide Row 1 and reference the column name vs referencing the letter of the column in the macro.

New columns added to reports will be visible in the MetaFarms Full version and hidden in the MetaFarms Summary version.

### **Release Highlights**

**Sow Enterprise:** In collaboration with one of our large producers, we spent a considerable amount of time in the barn with them learning how we can further streamline the process of capturing sow events. As a result, we redesigned our application and introduced the concept of "Rapid Entry" mode along with the support of a device called Chainway C66/C72 to further increase the efficiency of collecting event data. This enhanced process gives users the ability to record multiple events through scanning QR codes as opposed to hand keying data into a mobile application. After months of beta testing in a live production environment, these new enhancements are now available to our Sow Enterprise customers at no additional cost.

**PICTraq Export:** Currently wrapping up a successful Pilot with one producer and we are looking at moving into Beta Testing with a few additional producers in the coming months.

**System Updates:** Ongoing organizational and technical enhancements to our platform which will allow for more frequent and seamless releases for our customers.

**Security:** To continue to provide the highest level of security, MetaFarms will be requiring unique and valid emails for all users to insure we continue to meet both yours and our security standards.

## Release Features

### Finish

#### **Feature 1891 – Added Age to Movement Report**

Average Age-Days has been added to Movement Report and Movement Report Single Row.

### Sales

#### **Feature 1860 – Additional Premium Field**

An Additional Premium field has been added to the Lot grid for the following packers: Tyson, Hormel, Wholestone, Smithfield, Prestage, Prime Pork, and Triumph. The value in this field will carry over to the Market Sales Summary Additional Premium column.

### Sow

#### **Feature 1871 – Changed the Farrowing Chart Report to .xlsx Format**

The Sow Farrow Chart has been converted to .xlsx format.

#### **Feature 2073 – Added Mating Type to Semen Dose Distribution Report**

The Mating Type has been added.

#### **Feature 2080 – Change made to the Move In List Report**

The Move In List report now has an option added to Site Defaults called Calculate Due Date with Average Gestation Days. When this box is checked, the Due Date will be calculated using the actual farrow rate of the sow and not the standard Gestation Days.

## Release Defects

### Assurance

#### **Defect 1402 – Corrective Actions Not Displaying on App**

All corrective actions are now showing through the App.

#### **Defect 1747 – Assurance Assessment Review Report Error**

Assessment Type filter is now working on Assessment Review.

## **Finish**

### **Defect 1912 – Diet and Group Conversion Table Delete Issue**

A defect was fixed that was causing deletes of the group conversion table (individual lines or whole table) when deleting lines or tables from the Diet Conversion tables screen.

## **Sales**

### **Defect 1817 – Number of Head Not Correct**

Number of head now showing properly on the Market Sales Summary and the Group Market Load Distribution Reports.

### **Defect 2074 – Marketing Report Erroring Out**

A defect was fixed that was causing the Marketing report to error out.

## **Sow**

### **Defect 2065 – Part Wean Issue**

A defect was fixed that was preventing a wean after a part wean on Sow Mobile.

### **Defect 2167 – Sow Performance Monitor (Breed Batch) % Incorrect**

The calculation of % Bred <7 Days is now correct.

### **Defect 2203 – Sow Removal Issue**

A defect was fixed that was allowing a sow to be removed twice if the removal date was the same day.

### **Defect 1841 – HNS Before Arrival Issue**

A defect was fixed that was counting the gilts on the Sow Status List if they had a HNS but had not been arrived yet.

### **Defect 1549 – Sow Import Sow Flag Issue**

We have fixed an issue where importing a location change with sow flag information, the flag information was not visible. It is now visible in the sow history.

### **Sow Mobile**

#### **Defect 1818 – Sow Mobile Duplicate Weans**

A defect where sow mobile was duplicating weans has been fixed.

Sincerely,

Your MetaFarms Customer Support/Account Services Team
