

July 2023 Release

Release Notes

The MetaFarms software release will be implemented on July 25, 2023. **100%** of the below features and defects came from feedback from our customers. Please be sure to continue with your questions/comments on this release and any future enhancements you would like to see!

Below are some of the enhancements available and defects that were fixed.

Note: Additions to reports can result in changing column headers and may affect any macros you have for that report. To help reduce the impact on custom written macros, we suggest users unhide Row 1 and reference the column name vs referencing the letter of the column in the macro.

New columns added to reports will be visible in the MetaFarms Full version and hidden in the MetaFarms Summary version.

Release Features

Setup

Feature 2711 – Company Setup – Pen Level Alert for Group Deaths Only

A new field has been added to the Site setup labeled Pen Level Alert Option which now allows for alerting with the option for Death Only. Before this change, when the Pen Level Notification Threshold was met, it was based on Death & Euthanized in a Group.

API

Feature 3132 – PICTraq API Modification – Abort Event

Removed the HNS events from the Abort API.

Feature 3138 – PICTraq API - Wean Event on Nurse Sows

Now able to enter a sow as a nurse sow with multiple wean events and post each event to the Sow Id using the PICTraq API without creating an error. (Not sending original birth litter size on nursed sow wean events)

Feature 3140 – PIC API Settings – Genetic Lines

A new setting is available on the Site Defaults screen to allow for the selection of only certain Sow Genetic Lines to be captured and sent via the PICTraq API.

Feature 3141 – PICTraq API – Genetic Lines

The PICTraq API has been changed to look at the new Sow Genetic Lines setting on the Site Defaults screen to only send those genetic lines to PIC.

Release Defects

Finance

Defect 3142 – Setup – Expense Roll-Up Categories Not Saving Selection

A defect was fixed where the Rollup Allocations would not save during setup under Finance > Setup > Expense Categories.

Feed

Defect 3131 – Feed Imports - Duplicated Feed Orders

A defect was fixed that was creating duplicate feed orders if a feed order was changed prior to the Reporting API running and sending the feed order to the feed mill.

Sow

Defect 3067 – Estrus Analysis Report – Label Change

Changed the label on Row 149 on the Summary tab of the Estrus Analysis report from Post Weaning Mortality to Pre Wean Mortality to better identify the calculation.

Defect 3090 – Sow Performance Monitor by Breed Batch Report Performance

Fixed an issue that was causing performance issues for the Sow Performance Monitor by Breed Batch report which caused the report to time out.

Sales

Defect 3093 – Marketing Transportation Analysis Report - Calculation Fix Needed

Fixed an issue where the Total Transit Loss % was calculated incorrectly. It now calculates using (Subs + DOA)/Total Delivered just as the calculation states.

Sincerely,

Your MetaFarms Customer Support/Account Services Team
