

## Lactation Length and Wean Age

Average Lactation Length and Average Wean Age are calculated differently.

Average Wean Age is Farrow Date to Wean Date OR Nurse On Date to Wean Date.

Lactation Length is Farrow Date to LAST Wean Date.

Example:

If a sow farrows on June 1 and weans on June 20, Wean Age is 20 days and so is Lactation Days.

BUT, if she Nurses On June 20 and weans again on June 30, Wean Age is 10 Days PLUS the Nurse On Age.

Lactation Length for that sow is now 30 days.
