

May 2023 Release

Release Notes

The MetaFarms software release will be implemented on May 30, 2023. **100%** of the below features and defects came from feedback from our customers. Please be sure to continue with your questions/comments on this release and any future enhancements you would like to see!

Below are some of the enhancements available and defects that were fixed.

Note: Additions to reports can result in changing column headers and may affect any macros you have for that report. To help reduce the impact on custom written macros, we suggest users unhide Row 1 and reference the column name vs referencing the letter of the column in the macro.

New columns added to reports will be visible in the MetaFarms Full version and hidden in the MetaFarms Summary version.

Release Highlights

Here are a couple highlights being featured in this release.

New Packer Import (Yosemite Meats). MetaFarms worked with individuals at Yosemite Meats to build an import with the data sent to customers for each load of pigs delivered to the plant in CA. The amount of data being collected and shared with customers is limited. However, detailed carcass weights can now be imported to help when looking at load performance. If you would like to have this packer added to your portal, please contact Support.

Several Finish and Sales reports were enhanced to include additional fields requested by customers.

The MetaFarms Agview API, which sends movement and premise information to AgView, has been enhanced with improved security. Both MetaFarms and AgView now support a more secure transfer model using OAuth security tokens to transfer data between systems over the internet. This enhancement requires much longer keys/secrets to authenticate and transfer data.

Release Features

Finish

Feature 2591 – Group Batch Added to the Movement Report

A Group Batch column has been added to the Movement Report.

Feature 2592 – Group Batch Added to the Inventory Flow (Age on Feed) Report

A Group Batch column has been added to the Inventory Flow (Age on Feed) Report.

Feature 2593 – Group Batch Added to the Single Row Movement Report

A Group Batch column has been added to the Single Row Movement Report.

Feature 2594 – Group Batch Added to the Mortality List Report

A Group Batch column has been added to the Mortality List Report.

Feature 2595 – Group Batch Added to the Mortality Analysis Report

A Group Batch column has been added to the Mortality List Report.

Feature 2596 – Group Batch Added to the Group Treatment Report

A Group Batch column has been added to the Group Treatment Report.

Feature 2597 – Group Batch Added to the Active Group by Week Report

A Group Batch column has been added to the Active Group by Week Report.

Feature 2598 – Group Batch Added to the Inventory by Production Week Report

A Group Batch column has been added to the Inventory by Production Week Report.

Feature 2598 – Group Batch Added to the Current Group Mortality Report

A Group Batch column has been added to the Current Group Mortality Report.

Feature 2600 – Avg Age – Days Now Calculates Automatically on Movements

When creating a movement and Avg Age – Days is exposed on the movement grid, it now auto calculates when the movement is saved.

Sow

Feature 2518 – Current Location Added to Sow History Pop-Up

When the History button is clicked after selecting a sow via the Sow Search screen, you will now see the most recent location that has been entered to this sow.

Sales

Feature 2513 – New Packer Import: Yosemite Meats

MetaFarms has built a new packer import for Yosemite Meats. The amount of data being collected is limited but detailed carcass weights are being imported. If you would like to have this packer added to your portal, please contact Support.

Feature 2602 – Delivered Live Calculation Changed on Market Sales Summary Report

The Market Sales Summary report has been changed to include in the calculation of Delivered Live the Dead Weight, Discounted Weight, and Condemned Weight. Also, the Dead Weight and Condemned Weight columns have been added to this report. (Columns AV and AZ respectively)

Feature 2999 – Marketing Transportation Analysis Report Changes

There have been several enhancements made to the Marketing Transportation Analysis report. New columns added are Resales (Column AH), % Resales (Column AI), Total Transit Loss (Column AP), Total Transit Loss % (Column AQ), and Process % (Column AS). Column AE has been renamed to be Total Delivered and Total Processed has been moved to Column AR. Descriptions of what each field represents can be found as a comment in the column header.

Reporting

Feature 2570 – Heat Detection Added to PICTraq Export

A new tab called Heat Detection has been added to the PICTraq Export Report. It is designed to capture the animals that have been observed with a HNS event.

API

Feature 2584 – AgView Now Supports Emailing via SendGrid API

The MetaFarms AgView API that sends data to AgView has been enhanced to use the MetaFarms SendGrid API for notifications.

Feature 2766 – AgView API Now Deleting Movements in AgView

A change has been made to the MetaFarms AgView API that now deletes any movements in AgView that have been previously sent to AgView and have been deleted in MetaFarms.

Release Defects

Finish

Defect 2705 – Saving Cull Sales in Mobile Movements

Fixed an issue where the Site/Source information was missing until you saved and reopened the movement.

Assurance

Defect 2745 – Assurance Scoring

Fixed an issue where the Threshold calculations on the PQA audit wasn't calculating correctly.

Sow

Defect 2723 – Sow Performance Monitor (Breed Batch) Report

Fixed an issue on the Sow Performance Monitor - Breed Batch report where the projected annual replacement rate % for the total column is now an average instead cumulative number.

Sales

Defect 2759 – Market Sales Summary – Condemn Weight Incorrect

It was determined that the condemned weight being brought in the Market Sales Summary was incorrect from the import of packer sales. This has been corrected.

API

Defect 2569 – AgView OAuth API not Working at the Producer Level

A defect has been fixed where the AgView OAuth API was sending all the company's movement and premise information to AgView instead of just the data specific to the producer with the key and secret enabled.

Defect 2687 – Movement API not Showing State Value

The call to the Movement API was returning the first two characters of the city for a customer if the State was not filled out. This has been corrected.

Sincerely,

Your MetaFarms Customer Support/Account Services Team
