

## ***May 2018 Release***

### **Release Notes**

---

The MetaFarms software release was implemented on May 18th. We would like to share some of the enhancements available and defects that were fixed.

Note: Additions to reports can result in changing column headers and may affect any macros you have for that report. To help reduce the impact on custom written macros, we suggest users unhide Row 1 and reference the column name vs referencing the letter of the column in the macro.

New Columns added to reports will be visible in the MetaFarms Full version and hidden in the MetaFarms Summary version.

### **Release Features**

#### **(Assurance) Feature 3015 - Assessment Report Additions**

Assessment Questions Report - Detail tab: We have added reporting capabilities for the PQA Site Assessment. Columns added are: Breeding Animals on Site (Column R), Non-Breeding Animals on Site (Column S), Breeding Animals Observed (Column T), Non-Breeding Animals Observed (Column U), Production Phase (Column V), Producer on Site (Column W), and Owner of Animals (Column X). If you run a macro for this report, it may be affected.

#### **(Feed) Feature 3030 - Adding Sub-Groups to the Feed Data Entry Screen**

Sub-Groups have been added to the grids for manually entering feed deliveries. If you want to manually enter feed at the sub-group level, please reach out to Support enable this feature.

#### **(Feed) Feature 2961 - Group Detail Closeout report - Add grain bank to Feed Deliveries by Date**

On the Feed Deliveries by Date tab of the Group Detail Closeout report, the grain bank breakdown has been added so you can see the invoice totals vs. grain bank totals. The columns that have been effected are Columns O, P, T, and U. If you run a macro for this report, it may be affected.

#### **(Finish) Feature 2851 - New Mortality Import**

The Mortality Import screen has been updated to the new format. There is a procedure for this change on the Help page.

#### **(Finish) Feature 3031 - Added Sub Groups to all Health Entry Screens**

We have added the ability to manually enter events at the sub-group level for Treatments, Health Scores and Vet Visits. If you want to enter at the sub-group level for these events, please contact Support to enable this feature.

#### **(Finish) Feature 3034 - Subgroups added to the Group Treatment Report**

We have added the ability to report on Treatments at the sub-group level. This new column has been added to the Detail tab (Column F). The Group Treatment Report can be found in the Finish tab.

**(Sales) Feature 2965 - Split Lots – Lock in Min/Max and STDDEV**

When splitting a Sales Lot, the following fields will retain the Lot information from the beginning imported Lot:

Min Carcass Weight

Max Carcass Weight

Standard Deviation Carcass Weight

Standard Deviation Live Weight

Min Live Weight

Max Live Weight

The purpose for this change is to allow customers that run reports to not lose this insight since a split lot randomly assigns the carcasses and recalculating these numbers after the split provides no insight to the overall truck load.

**(Sales) Feature 3013 - Add Trucking Company and Truck Driver to Market Sales Summary**

Trucking Company has been added in Column AG and Truck Driver in Column AH on the MetaFarms Full version of the report. If you run a macro for this report, it may be affected.

**(Sow Enterprise) Feature 2955 - New Report – Sow Snapshot for Sow Mobile and ESF**

For customers upgrading to Sow Enterprise, there is a new Sow Snapshot report now that will be placed on your menus under Analytics | Snapshots | Sow Snapshot. This weekly report supports Daily targets and Daily monitoring of sow data (Keyed, Imported, or Entered on Mobile App).

**(Sow Enterprise) Feature 2978 - Add Ability to Add Mating on Prior Date**

On Sow Mobile you are now allowed to enter a mating on a prior date after entering a mating for the current date without getting an error in Review Mobile Events.

### Release Defects

**(Feed) Defect 1473 - Grain Bank Errors Not Displaying Correct Amount Per Load**

This has been corrected.

**(Feed) Defect 1474 - Update Feed Delivery Issues**

Two fixes have gone into place. Changing the date of the delivery will now save correctly. Also, after editing, the group will show the group name correctly.

**(Mortality App) Defect 1464 - Pigs Started Different on App than Report**

This has been corrected.

**(Sow Enterprise) Defect 1470 - Review Mobile Events - Required Wean Balance Zero Not Working Correctly**

This has been fixed.

**(Sow Enterprise) Defect 1471 - Device Name is not updating when changed on preferences form.**

The Device Name that a user can set in the Preferences setup was not updating on sync back to the MetaFarms database. This has been corrected. Any users needing the Device Name to be corrected can simply install the new Sow Mobile App v3.0

Please send us any comments regarding this release, both positive and negative. We appreciate them all as they help us to better serve your needs in future releases.

Sincerely,

Your MetaFarms Customer Support/Account Services Team
