

Introducing MetaFarms Herd Health Mobile App for Mortality

MetaFarms' mobile app for mortality was designed specifically for death loss data entry on your phone or hand held device. The need to track and monitor mortality while on site at the barn is vital to making fast decisions when it comes to animal health. Having the ability to monitor death loss at the barn, with graphs and data in the palm of your hand, opens the door to faster reaction time and reduces the potential for additional loss.

NEW

Features

The ability to set data entry preferences allows a user to customize their MetaFarms mobile access experience. Syncs real-time with MetaFarms Enterprise Livestock Management Solutions.

- **Select your preferences:** Frequency of entries, and language
- **Receive email reminders at the same time each day, so that no one misses getting their deads reported by your deadline**
- **Ability to enter death loss at multiple groups and barns with secure user access**
- **Capture details such as quantity, death type, reason code, and weight**
- **Important group information available such as DOF, start date and inventory, as well as graphs for death loss this week, and through duration of the group**
- **Android and iOS compatible, available on the Apple Store and Google Play Store**
