

October 2024 Release

Release Notes

The MetaFarms software release will be implemented on October 1, 2024. **100%** of the below features and defects came from feedback from our customers. Please be sure to continue with your questions/comments on this release and any future enhancements you would like to see!

Below are some of the enhancements available and defects that were fixed.

**** Note:** Additions to reports can result in changing column headers, inserting new columns and rows, and may affect any macros you have for that report. To help reduce the impact on custom written macros, we suggest users unhide Row 1 and reference the column name vs referencing the letter of the column in the macro.

New columns added to reports will be visible in the MetaFarms Full version and hidden in the MetaFarms Summary version.

Release Features

General

Feature 611 – Tab View for Company Defaults

We have enhanced the layout of the Company Defaults page to display sections as tabs across the top instead of a scrolling list. This will improve the navigation for users with many sections in Company Defaults.

Finish

Feature 6306 – Default Health Status from Pig Flow

When a user selects a Pig Flow on the Group Detail screen, if that Pig Flow has a Health Status applied to it, it will be defaulted in for the group. The defaulted Health Status can be changed if the user would like a different Health Status for the group.

Sales

Feature 6044 – Condemned and Discounted Values Moved in Market Sales Summary Report

Condemn Value (Column DB), Condemned Value/Hd (Column DC), Condemned Value/Cwt C (Column DD), and Condemned Value/Cwt L (Column DE) were added under the Load Income section on the Sales tab of the Market Sales Summary Report. The report was also changed to move Dis-counted Value (From Column EN to Column DF), Dis-counted Value/Hd (From Column EO to Column DG), Dis-counted Value/Cwt C (From Column EP to Column DH), and Dis-counted Value/Cwt L (From Column EQ to Column DI) from the Load Expenses section to the Load Income section on the Sales tab. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6075 – Add PO Field to Market Sales Distribution Charts Report

PO # was added as Column AF to all tabs of the Market Sales Distribution Charts Report. The value will show if hand entered on the sales grid, if available, or imported from the packer. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6076 – Add PO Field to Market Sales Summary Report

PO # was added as Column AM to the Market Sales Summary Report. The value will show if hand entered on the sales grid, if available, or imported from the packer. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6077 – Add PO Field to Marketing Report

PO # was added as Column G to the Marketing Report. The value will show if hand entered on the sales grid, if available, or imported from the packer. If you have macros built against this report, you will need to modify them to work with these additions.

Sow

Feature 6115 – Add Pre-Wean Mortality % to Breeding Farrow Cohort Report

Pre-Wean Mortality % - V2 was added as Column W to the Breeding Farrow Cohort Report. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6116 – Add Pre-Wean Mortality % to Breeding Farrow Cohort (Breed Batch) Report

Pre-Wean Mortality % - V2 was added as Column W to the Breeding Farrow Cohort (Breed Batch) Report. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6117 – Add Parity Run-By Option to Farrowing Chart Report

We have added a Parity run-by option to the Farrowing Chart Report. You can select one or more parities to run the report by or check all to run the report for all parities.

Feature 6118 – Add Parity Run-By Option to Farrowing Chart (Breed Batch) Report

We have added a Parity run-by option to the Farrowing Chart (Breed Batch) Report. You can select one or more parities to run the report by or check all to run the report for all parities.

Feature 6176 – Add Sows Aborted to Sow Performance Monitor (Calendar) Report

Sows aborted was added as Row 39 to the Sow Performance Monitor (Calendar) Report. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6187 – Add Sows Aborted to System Sow Performance Monitor Report

Sows aborted was added as Row 38 to the System Sow Performance Monitor Report. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6188 – Add Sows Aborted to System Sow Farm Comparison Report

Sows aborted was added as Row 34 to the System Sow Farm Comparison Report. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6187 – Add Sows Aborted to Sow Performance Range Comparison Report

Sows aborted was added as Row 35 to the Sow Performance Range Comparison Report. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6187 – Add Sows Aborted to System Parity Comparison Report

Sows aborted was added as Row 24 to the System Parity Comparison Report. If you have macros built against this report, you will need to modify them to work with these additions.

Feature 6187 – Add Sows Aborted to Parity Comparison Report

Sows aborted was added as Row 27 to the Parity Comparison Report. If you have macros built against this report, you will need to modify them to work with these additions.

Release Defects

AgView

Defect 6207 – AgView API Not Deleting Movements of Less Than 20 Pigs

Fixed an issue where a movement that was sent to AgView with less than 20 pigs, that was later deleted in MetaFarms, wasn't being deleted in AgView. Any movement that is deleted in MetaFarms will be deleted in AgView automatically.

Sow

Defect 6119 – Farrowing Chart Report Fails on Running Report Type MetaFarms Full

Fixed an issue where the Farrowing Chart Report was failing when it was run using the Report Layout of MetaFarms Full if the customer is setup as a Non-1000 Day Customer.

Defect 6122 – Parity Distribution (% of Sows) Graph on Parity Comparison Report

Fixed an issue so the Parity Distribution (% of Sows) graph is displaying the correct values in the Parity Comparison Report.

Defect 5847 – Parity Distribution (No. of Sows) Graph on Parity Comparison Report

Fixed an issue so the Parity Distribution (No. of Sows) graph is displaying the correct values in the Parity Comparison Report.

Defect 6245 – Divide by Zero Error - Sow Performance Monitor by Genetic Line

Fixed an issue where the Sow Performance Monitor by Genetic Line was receiving a Divide by Zero Error when run for a site with groups that were not started in the time frame the report was being run by.

Defect 6333 – Sow Card Not Showing Due to Farrow Date

Fixed an issue where the 2 Card per Page with Treatments sow card was not showing Due to Farrow Date for normal calendar due to font sizing.

Feed

Defect 6157 – Ingredients Total on Feed Usage Report

Fixed an issue where the Feed Usage Report was incorrectly reporting Ingredients in lbs. for diets that were in tons. Total for ingredients now converting correctly and shown on Feed Usage Report.

Defect 6269 – Required Code for Feed Budget Entry

Fixed an issue where a Feed Budget could be saved without the required code field.

Defect 6310 – Left To Feed Balance Not Updating Immediately

Fixed an issue where the Left To Feed balance was not updated immediately after an order was sent.

Finish**Defect 6056 – Movement Exception Report Fails for Long Movement ID**

Fixed an issue where the Movement Exception Report would not run due to a Movement ID being too long.

Defect 6234 – Group Treatment Calculation for Negative Expenses

Fixed an issue where we were not calculating negative expense dollars when importing an expense with negative cost.

Sales**Defect 6281 – Additional Premium (Prop 12) on Split Lots**

Fixed an issue where the Additional Premium (Prop 12) amount was being doubled instead of being split when a Sales lot is split between groups.

Sincerely,

Your MetaFarms Customer Support/Account Services Team
