

## Wean to First Service Calculation

This calculation actually works backwards. We do not take the sows weaned and report the days to first service. This is the pig champ standard. We do this on another calculation - Wean to Bred, and it does include cull sows.

Wean to First Service starts by looking at all Sows Bred that week and then checks if it's her first service and IF YES will back calculate to the wean date. (Service Date – Wean Date) 6/1/2014 – 5/15/2014 = 16 days

So it includes ONLY SOWS BRED that week. If the sow is not bred, ie: culled before she is served, she is not included.

If you cull her AFTER she is BRED we do not remove her.
